GLOBAL STANDARD IN ICT INFRASTRUCTURE

When a global social media giant decided to open offices in South African, they appointed BT-SA as their local infrastructure partner. The client expected global standard service delivery, supported by internationally recognised and supported technology and services.

MEETING THE GLOBAL STANDARDS

In order to meet the global standard requirements of the project, BT-SA received international training through every aspect of the project, to ensure that the installation and service match the aesthetics, culture and dynamic of the global company to a tee.

The client had a very particular international recipe for infrastructure that needed to be adhered to in every region it is represented.

BT-SA's approach to compliance, zero-tolerance attitude towards health and safety, work ethic and industry knowledge and experience, put them in the same class as any of their international contractors globally.

PROJECT SCOPE

BT-SA was responsible for the building of the MDF (Main Distribution Frame) for the Social Media company that included:

- Installation
- Labelling
- Testing
- Certifying of CAT6 data points
- Patching of data points to network switch equipment
- Supplying and installing all CCTV camera cabling

TAKING CLIENT RELATIONS TO THE NEXT LEVEL

BT-SA assigned a dedicated Project Manager who was tasked to ensure that the project was delivered punctually and in line with the projected timelines.

BT-SA has since partnered with a number of global enterprises and keep expanding the boundaries of the local market.

"We were able to meet and exceed the quality and compliance requirements of the client"

BT-SA is a **Level 1 B-BBEE** end-to-end ICT infrastructure solutions partner with a national footprint in southern Africa.

Our extensive service portfolio includes design, integration and management services for government and private sector, big or small.
